

Balanced Global Portfolio Overview

Illustrative research | Prepared by Luna Terminal | October 2026 Allocation snapshot

Portfolio overview

This fictional model allocates 40% to US equities, 20% to international equities, and 40% to fixed income. The allocation describes a research example, not a personalized recommendation or a brokerage account. The figures use a \$100,000 illustrative notional. No live performance, income, fees, or suitability assessment is included.

US equity		40.0%
International equity		20.0%
Fixed income		40.0%

Balanced Global Portfolio Overview

Research & next steps

Questions for a portfolio review: How much liquidity is required? Does the investment horizon match the allocation? Is regional or sector concentration appropriate? What assumptions would change after reviewing actual fund holdings, expense ratios, tax considerations, and historical total returns? Those provider inputs are unavailable in this preview.
